Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- 1 Claim 1 (currently amended): A method of establishing
- 2 a binaural communication link between two hearing devices
- at an individual by at least two electrical conductors,
- 4 each of said hearing devices comprising an electrical to
- 5 <u>mechanical output converter</u>, the <u>method</u> comprising the
- 6 steps of establishing one of said at least two electrical
- 7 conductors by the individual's body and a second one of
- 8 said at least two electrical conductors by a wire.
- 1 Claim 2 (previously presented): The method of claim
- 2 1, further comprising bi-directionally transmitting
- 3 electrical signals between said hearing devices.
- 1 Claim 3 (previously presented): The method of claim 1,
- 2 further comprising transmitting at least one of control
- 3 signals and of audio signals via said communication link.
- 1 Claim 4 (previously presented): The method of claim
- 2 1, further comprising providing an electronic unit
- 3 communicating by said link with said devices.

Appln. No. 10/054,479 Amdt. Dated September 2, 2005 Reply to Office Action of June 8, 2005

- 1 Claim 5 (currently amended): The method of claim 4,
- 2 wherein said unit comprises a receiver-/transmitter-unit
- 3 for wireless communication and establishing communication.
- 1 Claim 6 (currently amended): The method of claim 1,
- wherein one of said two hearing devices is a master and the
- 3 second of said hearing devices is a slave.
- 1 Claim 7 (previously presented): The method of claim
- 5, further comprising providing said transmitter-/receiver
- unit between said two hearing devices.
- Claim 8 (previously presented): The method of claim
- 2 1, further comprising applying said wire to at least one of
- 3 said hearing devices by magnetic attraction.
- 1 Claim 9 (previously presented): The method of claim
- 2 8, further comprising establishing by said magnetic
- 3 attraction an electric conduction contact of said wire to
- 4 an input tab of said at least one hearing device.
- 1 Claim 10 (previously presented): The method of claim
- 9, further comprising establishing said conduction contact
- 3 by at least one of a magnetic and of a ferromagnetic
- 4 member.

- 1 Claim 11 (previously presented): The method of claim
- 2 9, further comprising establishing said conduction contact
- 3 with at least one of a non-magnetic metal contact member,
- a conductive polymer contact member.
- 1 Claim 12 (previously presented): The method of claim
- 2 8, further comprising establishing by said magnetic
- 3 attraction a capacitive electric contact of said wire to an
- 4 input of said at least one hearing device.
- 1 Claim 13 (previously presented): The method of claim
- 1, further comprising establishing electric contact to said
- 3 individual's body from said devices by a conduction body
- 4 electrode comprising at least one of a metallic and of a
- 5 conductive polymer body electrode.
- 1 Claim 14 (previously presented): The method of claim
- 1, further comprising establishing electric contact to said
- 3 individual's body by a series capacitance electrode from
- 4 said hearing devices.
- 1 Claim 15 (previously presented): The method of claim
- 2 8, further comprising establishing a predetermined relative
- 3 positioning of a contact area at said wire and a contact

Appln. No. 10/054,479 Amdt. Dated September 2, 2005 Reply to Office Action of June 8, 2005

- 4 area at said at least one hearing device, by said magnetic
- 5 attraction.
- 1 Claim 16 (previously presented): The method of claim
- 2 8, further comprising enabling or disabling applying said
- 3 wire to one of said two hearing devices by appropriately
- 4 selecting magnetic polarities of respective magnetic
- 5 arrangements at said at least one hearing device and said
- 6 wire.
- 1 Claim 17 (previously presented): The method of claim
- 2 1, further comprising providing an electronic unit
- 3 interconnected between said two hearing devices by said
- 4 communication link and providing at said electronic unit an
- 5 electrode to said individual's body comprising one of a
- 6 conduction body electrode, preferably of at least one of a
- 7 metal and of a conductive polymer and of a capacitive body
- 8 electrode.
- 1 Claim 18 (previously presented): The method of claim
- 1, wherein said hearing devices are one of in-the-ear and
- outside-the-ear hearing devices.
- 1 Claim 19 (previously presented): The method of claim
- 2 1, wherein said hearing devices are therapeutical hearing
- 3 aid devices.

- 1 Claim 20 (previously presented): The method of claim
- 2 1 further comprising integrating said communication link
- into a head-worn assembly, preferably into glasses.
- 1 Claim 21 (previously presented): The method of claim
- 2 20, further comprising establishing electric connection of
- 3 said wire to at least one of said hearing devices by
- 4 putting on said glasses.
- 1 Claim 22 (currently amended): A binaural hearing
- 2 device set comprising a pair of hearing devices and a
- 3 communication link between said pair of hearing devices,
- 4 said communication link comprising a pair of body
- 5 electrodes for establishing an electrically conductive
- 6 communication path by using the body of an individual
- 7 wearing said binaural hearing device set as an electrical
- 8 conductor, and each of said pair of hearing devices
- 9 comprising an electrical to mechanical output converter,
- wherein said communication link further comprises at least
- 11 one single wire.

Claim 23 (canceled)

Appln. No. 10/054,479 Amdt. Dated September 2, 2005 Reply to Office Action of June 8, 2005

- 1 Claim 24 (previously presented): The set of claim 22,
- 2 wherein said communication link further comprises an
- 3 electronic unit and two single wires respectively
- 4 connectable to said hearing devices on one side and to said
- 5 electronic unit on the other side.
- 1 Claim 25 (previously presented): The set of claim 24,
- 2 wherein said electronic unit comprises a wireless
- 3 transmitter-/receiver-unit operationally connected to
- 4 contact areas for said two wires.
- 1 Claim 26 (previously presented): The set of claim 23,
- 2 further comprising a magnetic connection arrangement
- 3 between at least one end of said wire and at least one of
- 4 said two hearing devices.
- 1 Claim 27 (previously presented): The set of claim 26,
- 2 wherein said magnetic connection comprises conductive
- 3 contact members at said hearing device and at said one end
- 4 respectively for establishing mutual galvanic contact
- 5 between said wire and said hearing device.
- 1 Claim 28 (previously presented): The set of claim 27,
- 2 wherein at least one of said conductive contact members
- 3 comprises a magnet or being made of ferromagnetic metal.

- 1 Claim 29 (previously presented): The set of claim 27,
- 2 wherein at least one of said conductive contact members
- 3 comprises at least one of non-magnetic metal and of
- 4 conductive polymer.
- 1 Claim 30 (previously presented): The set of claim 26,
- 2 wherein said magnetic connection comprises a series
- 3 capacitance, established by establishing said magnetic
- connection.
- 1 Claim 31 (previously presented): The set of claim 22,
- 2 wherein said body electrode is a conductive plate or a
- 3 conductive plate covered with a dielectric material.
- 1 Claim 32 (previously presented): The set of claim 23,
- wherein said wire is integrated into a head-worn assembly.
- 1 Claim 33 (previously presented): The set of claim 22,
- 2 wherein said hearing devices are in-the-ear or outside-the-
- 3 ear hearing devices.
- 1 Claim 34 (previously presented): The set claim 22,
- 2 wherein said hearing devices are hearing aid devices.
